---

20-year-old Industrial Engineering student at PUCP with hands-on experience in Business Intelligence, data analysis and process optimization. I enjoy turning complex information into clear insights, building simple digital solutions, and proposing creative ways to improve operations. I'm especially interested in joining companies that are expanding their operations into LATAM, where I can learn fast, take ownership early, and contribute with a mix of analytical thinking, creativity, and a strong drive to grow.

## Experience

- **Business Intelligence Intern – BCP (Alternative Channels Area) [05 / 2025] – [01 / 2026]**
  - Designed and maintained dashboards enabling the Alternative Channels team to track daily and weekly performance, operational failures, and commercial results across 3+ major channels.
  - Extracted and transformed data from the KTCO database using SQL and Databricks to monitor real-time ATM activity, identify incidents and generate structured reports coordinated with the relevant agencies to support fast resolutions.
  - Proposed an initiative to automate the ATM incident reporting process by connecting internal databases to a dashboard that centralised incidents in real time, reducing manual work and improving response times.
  - Contributed to channel strategy by comparing the financial and operational performance of POS and ATM, helping the team identify which channels delivered the highest return and where investment or resource reallocation would generate the biggest impact.
- **Freelance at Web Development [12/ 2024] – [Present] :**
  - Built functional websites for small local businesses, focusing on clear structure to improve their digital presence using HTML, CSS, JavaScript and AI-assisted tools to speed up development and solve technical tasks more efficiently.
  - Managed the full project cycle: first meeting with clients, gathering requirements, web development, and final delivery with domain and hosting set up.
- **Data Analytics Internship at InnovaLab [01/2024] - [05/2024]:**
  - Participated in a university-led engineering project aimed at supporting a public healthcare center by analysing survey data on access to medical services.
  - Created SQL queries to extract and segment patient data by demographic groups, service type, waiting time ranges and frequency of visits, enabling deeper comparisons, and performed data cleaning using Python (Pandas)

## Education and Certifications

---

- Industrial Engineering - Pontificia Universidad Católica del Perú [2022 - Present]
- Summer Camp - Stanford Engineering and Business School, Business and Data Analytics [June 2025]

## Technical Skills

---

- Python (Pandas, Automation) - SQL (Intermediate) - Power BI (Advanced)
- Data Engineering: Databricks (basic ETL), Microsoft Azure
- Automation Tools: n8n (Intermediate), Power Automate (Intermediate)

## Additional Skills

---

- Effective Communication: Able to explain ideas clearly and adapt messages for technical and non-technical audiences.
- Professional Ethics
- Advanced English (B2 level, First Certificate)
- Content Creator for University Students audience (20k followers on socials)
